

McDonald's Reviews Sentiment Case Study Rubric

DS 4002 - Jonathan Sutkus

Submission Format: Upload link to Github on Canvas
Individual Assignment

General Description: Submit on Canvas a link to your Github repository containing your results from the case study. Instructions for what needs to be included in your repository can be found below.

Why am I doing this? This case study provides the opportunity to hone your data science skills while working with text data to extract meaningful insights from a data set of McDonald's restaurant reviews through the use of Latent Dirichlet Analysis (LDA).

What am I going to do? The Github repository with everything you will need to complete this case study can be found at: <https://github.com/JJSutkus/CS3-Serving-Sentiment>. You will need to download the original CSV file containing the McDonald's reviews in the DATA folder in the repository. You will then use the files in the SCRIPTS folder as a guide to obtain the adapted dataset required for performing LDA and the hypothesis test to assess the model. You can make your own hypothesis as for what you think the leading cause of good and bad reviews are, then use the scripts as a guide to run the LDA model and perform the hypothesis test to accurately test your prediction. Ultimately, you should display the amount of each topic for good and bad reviews alongside the results from your hypothesis test.

How will I know I have succeeded? You will meet the required specifications for this case study when you meet the following criteria in the rubric below.

Formatting	• Github repository (submitted via Canvas) containing the following: ◦ README.md ◦ LICENSE.md ◦ SCRIPTS folder ◦ References
README.md	• Use markdown headers to divide the content of the repository

	• Section 1: Software/Platforms ◦ Software used ◦ Platforms used ◦ Any packages required for scripts • Section 2: Map of Documentation ◦ Outline or tree to illustrate the hierarchy of folder and subfolders in the repository • Section 3: Instructions for reproducing results ◦ Include a step-by-step instruction manual to reproduce your results
LICENSE.md	• This file explains to a visitor the terms under which they may use and cite your repository. • Select an appropriate license from the GitHub options list on repository creation. • The MIT license is usually appropriate.
SCRIPTS folder	• This folder contains all the source code for your project. • Include all the scripts you used. This includes dataset creation, EDA, and your analysis. • Your scripts should include copious comments explaining what each command or sequence of commands accomplishes and what the purpose is.
References	• All references should be listed at the end of the document • Use IEEE Documentation style
